CAREER SUMMARY

Full-stack engineer with **2+ years** of experience owning the Reporter analytics service (Java/SpringBoot) and the surveys domain end to end, schemas, migrations, event ingestion pipelines, and reporting APIs across a Symfony/React monorepo. Delivered 60 features spanning survey question types and response handling, end-user identity resolution, data-retention jobs, and admin-panel/widget frontend work.

EXPERIENCE

- Fullstory** October 2025 – Present
Software Engineer Bangalore (Remote)
 - Owned the **Java/SpringBoot** based Reporter analytics microservice end to end
 - Built user identification for survey and tour reports, using Redis caching to reduce database queries **by 65%**, which enabled survey responses and tour activity to be linked to individual users.
 - Used Redis Streams and background workers to update entity data and process analytics.
 - Fixed out-of-memory failures in large CSV exports by processing records in batches and streaming the output.
 - Normalised emoji survey responses into a lookup table; made a previously unqueryable answer type aggregatable.
 - Built automated data-retention CronJobs which bounded table growth, reduced PII retention.
 - Debugged complex distributed systems involving asynchronous workers, Redis Streams, PostgreSQL, production bottlenecks, and cross-service communication.
 - Integrated Cursor Agent into the Git-based development workflow, automating AI-assisted review of code changes across all PRs and reducing repetitive manual review effort
- Accolite x Bounteous** July. 2024 – Sept. 2025
Software Engineer Bengaluru, India
 - Built and maintained **2 Java/Springboot microservices** in a distributed platform serving **~15K requests/day**, owning REST API design, MySQL schema changes and release support.
 - Cut p95 response time on the slowest reporting endpoints from **~1.8s to ~450ms** by adding composite indexes and rewriting N+1 query patterns over tables of **~20M rows**.
 - Implemented Apache Kafka producers and consumers handling **~500K events/day**, replacing synchronous service-to-service calls with asynchronous event-driven messaging.
 - Introduced a Redis caching layer on read-heavy endpoints, removing **30%** of repeat database queries at peak traffic.

PROJECTS

- Food Delivery Platform**
 - MERN ordering platform with a customer storefront and separate admin portal. Express + MongoDB REST APIs with JWT, bcrypt authentication, **Stripe and Razorpay** checkout, Multer image uploads, and complete cart-to-order lifecycle. Built two React (Vite) frontends. [Live](#). [Admin](#). [Code](#)
- Multi-Vendor E-commerce**
 - Marketplace supporting customer, seller and admin roles. Express + MongoDB backend with Stripe payouts, seller wallets, withdrawal requests, **Socket.IO** real-time chat, Cloudinary media storage and Redux Toolkit dashboard with ApexCharts analytics. [Code](#)

SKILLS

Languages:	Java, python, JavaScript, C++, SQL
Backend:	REST APIs, Microservices, Hibernate + Spring Data JPA, Springboot
Frontend:	React.js
Databases:	PostgreSQL, MongoDB
Cloud & Infrastructure:	Docker
Distributed Systems:	Apache Kafka, Redis Streams, Event-Driven Architecture
Tools:	Git, GitHub, Postman, Flyway, Rollbar,
Core CS:	Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, System Design
Soft Skills:	Problem Solving, Analytical Thinking, Communication, Decision making, observability

EDUCATION

B.E. Computer Science, Army Institute of Technology, Pune – **CGPA: 9.0/10** 2020 – 2024

ACHIEVEMENTS

- Google Kickstart: Global Rank of 1131 and 1206** in Round B and D in 2022.
- Max Rating 1607 (Expert)**, Global Best Rank **397** in round **782(Div.2)** at [Codeforces](#).
- Max Rating 1709**, Best All India Rank **480** and **4 Star** at [Codechef](#).
- Point gained 2500+ and **6 star** at [Hackerrank](#).
- Cleared the rounds of **Microsoft Intern Engage Mentee(05/2022-06/2022)**.
